BATCHLENS / PIXELTRENDANALYTICS

Pip investigates.
Operators decide.

Real Gemini tool calling connects evidence to an inspection mission, then learns from an operator-entered result.

01 **READ & TRACE**

GEMINI + VALIDATED TOOLS

Read source images and ledgers. Recover the missing slip. Cite original records.

02 **COMPARE CAUSES**

GEMINI FINDINGS

Compare component, assembly and handling explanations. Preserve missing evidence.

03 **PROPOSE A MISSION**

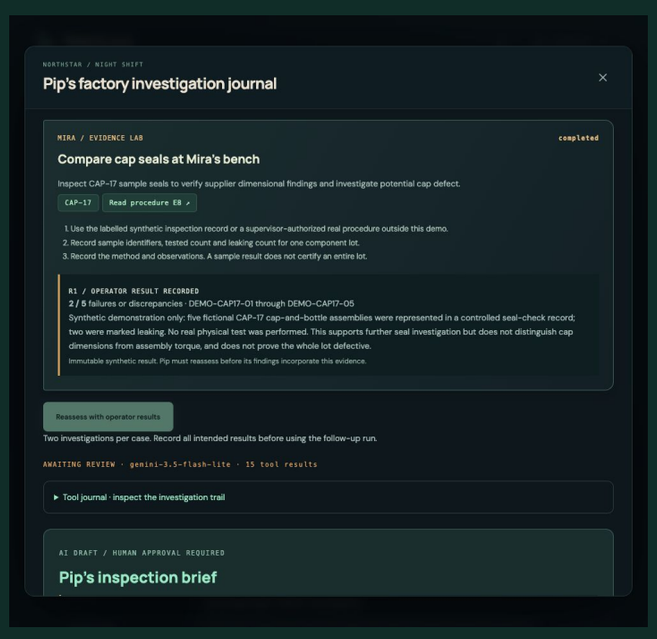

AI DRAFT / HUMAN APPROVAL

Select a fictional approved procedure. The operator approves the demo mission.

04 **RECORD & REASSESS**

OPERATOR RESULT -> GEMINI

Record a labelled synthetic result. Gemini revises its hypotheses with R-source citations.

THE VERIFIED DEMO

R1: 2 of 5 fictional assemblies leak. Gemini changes a hypothesis from unresolved to supported.

A small synthetic sample does not prove a lot-wide defect. Findings remain for human review.

OPERATIONS RADIO

Ask case-specific questions with citations. General queries are refused. Chat cannot change approvals.

Next: review scope, approve action drafts, save and export the handover.
